# LED TV
SERVICE MANUAL

CHASSIS : UAX2D

MODEL : 86UN8570AUD
86UN8570PUC
86UN8570PUB

CAUTION
BEFORE SERVICING THE CHASSIS, READ THE SAFETY PRECAUTIONS IN THIS MANUAL.

CONTENTS

SAFETY PRECAUTIONS

IMPORTANT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These parts are identified by ⚠ in the Exploded View.
It is essential that these special safety parts should be replaced with the same components as recommended in this manual to prevent Shock, Fire, or other Hazards.
Do not modify the original design without permission of manufacturer.

General Guidance

An **isolation Transformer should always be used** during the servicing of a receiver whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks.

It will also protect the receiver and it's components from being damaged by accidental shorts of the circuitry that may be inadvertently introduced during the service operation.

If any fuse (or Fusible Resistor) in this TV receiver is blown, replace it with the specified.

When replacing a high wattage resistor (Oxide Metal Film Resistor, over 1 W), keep the resistor 10 mm away from PCB.

Keep wires away from high voltage or high temperature parts.

Before returning the receiver to the customer,

always perform an **AC leakage current check** on the exposed metallic parts of the cabinet, such as antennas, terminals, etc., to be sure the set is safe to operate without damage of electrical shock.

Leakage Current Cold Check(Antenna Cold Check)
With the instrument AC plug removed from AC source, connect an electrical jumper across the two AC plug prongs. Place the AC switch in the on position, connect one lead of ohm-meter to the AC plug prongs tied together and touch other ohm-meter lead in turn to each exposed metallic parts such as antenna terminals, phone jacks, etc.
If the exposed metallic part has a return path to the chassis, the measured resistance should be between 1 MΩ and 5.2 MΩ.
When the exposed metal has no return path to the chassis the reading must be infinite.
An other abnormality exists that must be corrected before the receiver is returned to the customer.

Leakage Current Hot Check (See below Figure)
Plug the AC cord directly into the AC outlet.

Do not use a line Isolation Transformer during this check.
Connect 1.5 K / 10 watt resistor in parallel with a 0.15 uF capacitor between a known good earth ground (Water Pipe, Conduit, etc.) and the exposed metallic parts.
Measure the AC voltage across the resistor using AC voltmeter with 1000 ohms/volt or more sensitivity.
Reverse plug the AC cord into the AC outlet and repeat AC voltage measurements for each exposed metallic part. Any voltage measured must not exceed 0.75 volt RMS which is corresponds to 0.5 mA.
In case any measurement is out of the limits specified, there is possibility of shock hazard and the set must be checked and repaired before it is returned to the customer.

Leakage Current Hot Check circuit
When 25A is impressed between Earth and 2nd Ground for 1 second, Resistance must be less than 0.1 Ω
 *Base on Adjustment standard

SERVICING PRECAUTIONS

CAUTION: Before servicing receivers covered by this service manual and its supplements and addenda, read and follow the *SAFETY PRECAUTIONS* on page 3 of this publication.
NOTE: If unforeseen circumstances create conflict between the following servicing precautions and any of the safety precautions on page 3 of this publication, always follow the safety precautions. Remember: Safety First.

General Servicing Precautions
1. Always unplug the receiver AC power cord from the AC power source before;
   a. Removing or reinstalling any component, circuit board module or any other receiver assembly.
   b. Disconnecting or reconnecting any receiver electrical plug or other electrical connection.
   c. Connecting a test substitute in parallel with an electrolytic capacitor in the receiver.
   CAUTION: A wrong part substitution or incorrect polarity installation of electrolytic capacitors may result in an explosion hazard.
2. Test high voltage only by measuring it with an appropriate high voltage meter or other voltage measuring device (DVM, FETVOM, etc) equipped with a suitable high voltage probe. Do not test high voltage by "drawing an arc".
3. Do not spray chemicals on or near this receiver or any of its assemblies.
4. Unless specified otherwise in this service manual, clean electrical contacts only by applying the following mixture to the contacts with a pipe cleaner, cotton-tipped stick or comparable non-abrasive applicator; 10 % (by volume) Acetone and 90 % (by volume) isopropyl alcohol (90 % - 99 % strength)
   CAUTION: This is a flammable mixture.
   Unless specified otherwise in this service manual, lubrication of contacts in not required.
5. Do not defeat any plug/socket B+ voltage interlocks with which receivers covered by this service manual might be equipped.
6. Do not apply AC power to this instrument and/or any of its electrical assemblies unless all solid-state device heat sinks are correctly installed.
7. Always connect the test receiver ground lead to the receiver chassis ground before connecting the test receiver positive lead.
   Always remove the test receiver ground lead last.
8. Use with this receiver only the test fixtures specified in this service manual.
   CAUTION: Do not connect the test fixture ground strap to any heat sink in this receiver.

Electrostatically Sensitive (ES) Devices
Some semiconductor (solid-state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static by static electricity.
1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed to prevent potential shock reasons prior to applying power to the unit under test.

2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static type solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.
   CAUTION: Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.
8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device.)

General Soldering Guidelines
1. Use a grounded-tip, low-wattage soldering iron and appropriate tip size and shape that will maintain tip temperature within the range or 500 °F to 600 °F.
2. Use an appropriate gauge of RMA resin-core solder composed of 60 parts tin/40 parts lead.
3. Keep the soldering iron tip clean and well tinned.
4. Thoroughly clean the surfaces to be soldered. Use a mall wire-bristle (0.5 inch, or 1.25 cm) brush with a metal handle.
   Do not use freon-propelled spray-on cleaners.
5. Use the following unsoldering technique
   a. Allow the soldering iron tip to reach normal temperature. (500 °F to 600 °F)
   b. Heat the component lead until the solder melts.
   c. Quickly draw the melted solder with an anti-static, suction-type solder removal device or with solder braid.
   CAUTION: Work quickly to avoid overheating the circuit board printed foil.
6. Use the following soldering technique.
   a. Allow the soldering iron tip to reach a normal temperature (500 °F to 600 °F)
   b. First, hold the soldering iron tip and solder the strand against the component lead until the solder melts.
   c. Quickly move the soldering iron tip to the junction of the component lead and the printed circuit foil, and hold it there only until the solder flows onto and around both the component lead and the foil.
   CAUTION: Work quickly to avoid overheating the circuit board printed foil.
   d. Closely inspect the solder area and remove any excess or splashed solder with a small wire-bristle brush.

IC Remove/Replacement

Some chassis circuit boards have slotted holes (oblong) through which the IC leads are inserted and then bent flat against the circuit foil. When holes are the slotted type, the following technique should be used to remove and replace the IC. When working with boards using the familiar round hole, use the standard technique as outlined in paragraphs 5 and 6 above.

Removal
1. Desolder and straighten each IC lead in one operation by gently prying up on the lead with the soldering iron tip as the solder melts.
2. Draw away the melted solder with an anti-static suction-type solder removal device (or with solder braid) before removing the IC.

Replacement
1. Carefully insert the replacement IC in the circuit board.
2. Carefully bend each IC lead against the circuit foil pad and solder it.
3. Clean the soldered areas with a small wire-bristle brush. (It is not necessary to reapply acrylic coating to the areas).

"Small-Signal" Discrete Transistor Removal/Replacement
1. Remove the defective transistor by clipping its leads as close as possible to the component body.
2. Bend into a "U" shape the end of each of three leads remaining on the circuit board.
3. Bend into a "U" shape the replacement transistor leads.
4. Connect the replacement transistor leads to the corresponding leads extending from the circuit board and crimp the "U" with long nose pliers to insure metal to metal contact then solder each connection.

Power Output, Transistor Device
Removal/Replacement
1. Heat and remove all solder from around the transistor leads.
2. Remove the heat sink mounting screw (if so equipped).
3. Carefully remove the transistor from the heat sink of the circuit board.
4. Insert new transistor in the circuit board.
5. Solder each transistor lead, and clip off excess lead.
6. Replace heat sink.

Diode Removal/Replacement
1. Remove defective diode by clipping its leads as close as possible to diode body.
2. Bend the two remaining leads perpendicular y to the circuit board.
3. Observing diode polarity, wrap each lead of the new diode around the corresponding lead on the circuit board.
4. Securely crimp each connection and solder it.
5. Inspect (on the circuit board copper side) the solder joints of the two "original" leads. If they are not shiny, reheat them and if necessary, apply additional solder.

Fuse and Conventional Resistor
Removal/Replacement
1. Clip each fuse or resistor lead at top of the circuit board hollow stake.
2. Securely crimp the leads of replacement component around notch at stake top.

3. Solder the connections.
   CAUTION: Maintain original spacing between the replaced component and adjacent components and the circuit board to prevent excessive component temperatures.

Circuit Board Foil Repair

Excessive heat applied to the copper foil of any printed circuit board will weaken the adhesive that bonds the foil to the circuit board causing the foil to separate from or "lift-off" the board. The following guidelines and procedures should be followed whenever this condition is encountered.

At IC Connections
To repair a defective copper pattern at IC connections use the following procedure to install a jumper wire on the copper pattern side of the circuit board. (Use this technique only on IC connections).

1. Carefully remove the damaged copper pattern with a sharp knife. (Remove only as much copper as absolutely necessary).
2. carefully scratch away the solder resist and acrylic coating (if used) from the end of the remaining copper pattern.
3. Bend a small "U" in one end of a small gauge jumper wire and carefully crimp it around the IC pin. Solder the IC connection.
4. Route the jumper wire along the path of the out-away copper pattern and let it overlap the previously scraped end of the good copper pattern. Solder the overlapped area and clip off any excess jumper wire.

At Other Connections
Use the following technique to repair the defective copper pattern at connections other than IC Pins. This technique involves the installation of a jumper wire on the component side of the circuit board.

1. Remove the defective copper pattern with a sharp knife. Remove at least 1/4 inch of copper, to ensure that a hazardous condition will not exist if the jumper wire opens.
2. Trace along the copper pattern from both sides of the pattern break and locate the nearest component that is directly connected to the affected copper pattern.
3. Connect insulated 20-gauge jumper wire from the lead of the nearest component on one side of the pattern break to the lead of the nearest component on the other side.
   Carefully crimp and solder the connections.
   CAUTION: Be sure the insulated jumper wire is dressed so the it does not touch components or sharp edges.

SPECIFICATION

NOTE : Specifications and others are subject to change without notice for improvement.

1. Application range

This specification is applied to the LED TV used UAX2D chassis.

2. Test condition

Each part is tested as below without special appointment.

(1) Temperature: 25 °C ± 5 °C, CST: 40 °C ± 2 °C
(2) Relative Humidity: 65 % ± 10 %
(3) Power Voltage
   : Standard input voltage (AC 100-240 V~, 50/60 Hz)
   * Standard Voltage of each products is marked by models.
(4) Specification and performance of each parts are followed each drawing and specification by part number in accordance with BOM.
(5) The receiver must be operated for about 5 minutes prior to the adjustment.

3. Test method

(1) Performance: LGE TV test method followed
(2) Demanded other specification
   - Safety : CE, IEC specification
   - EMC : CE, IEC

4. General Specification

No	Item			Specification	Remark
1	Market			North America	
2	Broadcasting system			ATSC / NTSC-M, 64 & 256 QAM	
3	Available Channel			VHF : 02~13	
				UHF : 14~69	
				DTV : 02-69	
				CATV : 01~135	
				CADTV : 01~135	
4	Receiving system			Digital : ATSC, 64 & 256 QAM Analog : NTSC-M	
5	Video Input			NTSC-M	Rear (1EA)
6	Component Input			Y/Cb/Cr, Y/ Pb/Pr	Rear (1EA)
7	HDMI Input	UHD	HDMI 1	PC / DTV format	Side, Support 6Gbps
			HDMI 2	PC / DTV format	Side, Support 6Gbps, Support ARC
			HDMI 3	PC / DTV format	Rear, Support 6Gbps
			HDMI 4	PC / DTV format	Rear, Support 6Gbps
8	Audio Input			AV Audio / DVI Audio	L/R Input ; Rear AV and DVI use same jack ;
9	SPDIF out(1EA)			Optical Audio out	Rear
10	HeadPhone			HeadPhone out	
11	USB Input			EMF, DivX HD, For SVC (download)	JPEG, MP3, DivX HD

5. External Input Support Format
5.1. HDMI Input (PC/DTV)

# SOFTWARE UPDATE

1. USB

  (1) Insert the USB memory Stick to the USB port
 (2) Automatically detect the SW Version and show the below message

> The latest version of the software is available for your TV. Do you want to update now?
> (Version: 02.10.25)
>
> **No**   **Yes**

  (3) Click [YES]: initiate the download and install of the update.

> Software update is in progress. Please do not unplug the USB stick or power cord. You can check the update status in Settings.
>
> **Close**   **Check now**

  (4) Click [Check Now]: move to "About This TV" page for update
  (5) TV is updating

  (6) After finished the update, below Pop-up appear

> Software update has been successfully completed. Update will be applied when you restart your TV. Do you want to restart the TV now? Note that on-going functions like recording may be affected.
>
> **No**   **Yes**

  (7) Click [Yes] : TV will be DC OFF -> ON
  (8) After TV turned on, Check the updated SW Version and Tool Option

2. NSU

(This Function is needed to connect to the internet)
  (1) Menu -> All Settings -> Support -> Software Update

  (2) Click [CHEK FOR UPDATES] : system check newest version

  (3) Click [DOWNLOAD AND INSTALL]
  (4) TV is updating

  (5) After finished the update, below Pop-up appear

 (6) Turn OFF the TV and On. Check the updated SW Version and Tool Option

(11) Detach the Insulation Sheet 1ea ▢

[Assembly Guide]

(1) Attach the Insulation Sheet 1ea ▢

(2) Place the 2Pole Stand Supporter and M4*12 4EA Assemble screw ◯
(3) Assemble the Speaker 2ea. (ⓐ ⓑ)
(4) M3*5.5 8ea Assemble screw ◯
(5) Attach Connector 10ea ◯
(6) Attach Connector 2ea ◯
(7) M3*5.5 7ea Assemble screw ◯
(8) Attach the tape 5ea ▭ and Gasket 1ea.
(9) Since there are Latches(8ea) on the upper side of B/C, Assemble the Latches after cover the B/C.
(10) Assemble the B/C Screw 20ea.

⭕ :M3*5.5 1 EA Disassemble screw

🟢 :M4*10 15 EA Disassemble screw

🟠 :M8*10 4 EA Disassemble screw

⭕ : Latch 8 EA
(11) Attach the Power Cord Bracket and Assemble the screw 1ea.
Attach the Power Cord Bracket

Assemble the Power Cord Bracket Assy

⭕ :M3*5.5 1EA Disassemble screw

(12) Assemble the Stand Assy. (Assemble screw 6ea)

◯ : M4*30 6EA Disassemble screw

ASSEMBLY / DISASSEMBLY GUIDE (MODULE)

(Step 1) Disassemble tthe Main, PSU, SPK, Wifi, IR & Stand Bracket A,B
(Step 2) Disassemble the S-PCB Cover Shield (left/right).
  * Rear Sliver screw (left : 6-point / right : 6-point)

(Step 3) Reverse the LCM and disassemble the Source PCB from Holder
(Step 4) Disassemble the Case Top Screw (side) and Case Top

  *top 10ea / side L 6ea / side R 6ea / down 10ea

(Step 5) Disassemble the Panel.
* Use a tape to fix the FFC

(Step 6) 6 Disassemble the guide panel.

* 6-piece Guide Panel (Top 2ea / Side 2ea / Down 2ea)

(Step 7) Disassemble the Optical Sheet/Diffuser Plate (DS, Prism on Prism, DP)
(Step 8) Disassemble the DPS, LED Array Fixer(pin), and the Reflector

*Rotate the DPS
 to remove (23ea)

* Push the LED Fixer (6ea)
[LED Array Disassemble]
(1) Disassemle the CNT form LED Array.
(2) Separate the LED Array from Cover Bottom.(using a sharp tool)
(3) Remove the double tape form Cover Bottom.
[LED Array Assemble]
(Step 1) Attach the Double Tape
1) Attach the Double Tape in Guide Line of Cover Bottom (6ea)
2) Remove the protect film of Double Tape

* C/Bottom Guide Line
* Finish the Attached Double Tape (6ea)

(Step 2) Attach the LED Array
1) Attach the LED Array to Cover Bottom following the Guide Embo (with round hole)
2) Press the surface of the LED Array to fix.
3) Connect the CNT to the LED Array.

NG

OK

WE1 55V0 E74739 94V-

PSUNG WE1 55V0 E74739 94V-0
* 1st Attach Top Array A (6ea)   * 2nd Connect A to B   * 3rd Attach Bottom Array B (6ea)
* Finish the Attached LED Array

TROUBLE SHOOTING GUIDE

Contents of Standard Repair Process

8		Off when on, off while viewing, power auto on/off	8	
9	C. Audio error	No audio/Normal video	9	
10		Wrecked audio/discontinuation/noise	10	
11	D. Function error	Remote control & Local switch checking	11	
12		MR20 operating checking	12	
13		Wifi operating checking	13	
14		External device recognition error	14	
15	E. Noise	Circuit noise, mechanical noise	15	
16	F. Exterior error	Exterior defect	16	

First of all, Check whether there is SVC Bulletin in GSCS System for these model.

Standard Repair Process					
	Error symptom	**A. Video error**	**Established date**		
		No video/ Normal audio	**Revised date**		

First of all, Check whether all of cables between board is inserted properly or not.
(Main B/D↔ Power B/D, Each Cable for Panel, Speaker Cable, IR B/D Cable,,,)

☞**A1**

☞**A9**

No video
Normal audio → Normal audio → Y → Check Back Light On with naked eye → On → Y → Check Power Board 13.2V etc. → Normal voltage → Y → Replace T-con/Main Board or module

N → Move to No video/No audio

☞**A9** Check Power Board VLED output

N

☞**A10**

Normal voltage → Y → Error Check LED Driver BD by LED indicator → LED Driver BD error → Y → Replace LED Driver BD

N → Repair Power Board or parts

N → Repair Power Board or parts → End

N → Replace Module → End

※Precaution ☞**A4 & A2**

Always check & record S/W Version and White Balance value before replacing the Main Board → Replace Main Board → Re-enter White Balance value

1

Standard Repair Process					
	Error symptom	**A. Video error**		**Established date**	
		No video/ No audio		**Revised date**	

☞**A9**

No Video/ No audio → Check various voltages of Power Board (13.2V…) → **Normal voltage?**

— Y → Check and replace MAIN B/D → End

— N → Replace Power Board and repair parts → End

2
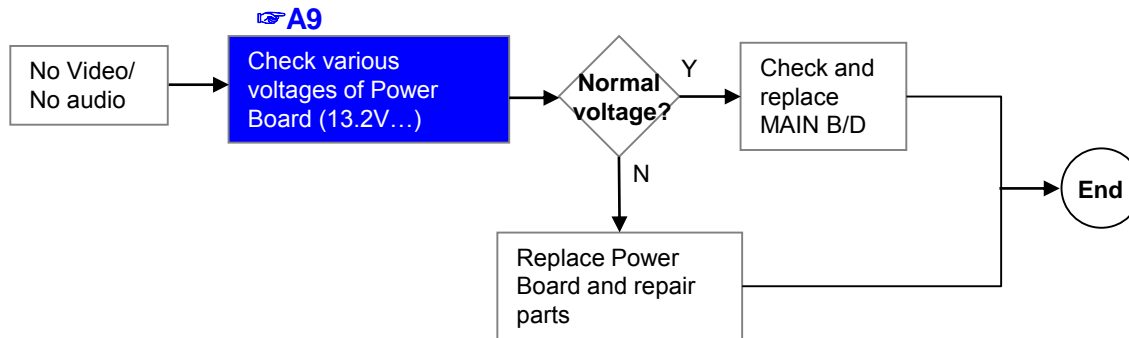

Standard Repair Process					
	Error symptom	**A. Video error**	**Established date**		
		Picture broken/ Freezing	**Revised date**		

☞ **A3**

Check RF Signal level

. By using Digital signal level meter
. By using Diagnostics menu on OSD
  (Advanced→ Channels→ Channel Tuning→ Manual Tuning → Check the Signal)
  - Signal strength (Normal : over 50%)
  - Signal Quality (Normal: over 50%)

Normal Signal? → **Y** → **Check whether other equipments have problem or not. (By connecting RF Cable at other equipment) → DVD Player ,Set-Top-Box, Different maker TV etc`**

N

Check RF Cable Connection
1. Reconnection
2. Install Booster

Normal Picture? — **N** → **Contact with signal distributor or broadcaster (Cable or Air)**

Y

Close

Normal Picture? — **Y** → ☞ **A4** **Check S/W Version** → **SVC Bulletin?** — **N** → **Check Tuner soldering** — **Y** → **Close**

N (from Normal Picture?)

SVC Bulletin? — **Y** → **S/W Upgrade**

Normal Picture? — **N**

Y

Close

Check Tuner soldering — **N** → **Replace Main B/D**

3

Standard Repair Process					
	Error symptom	**A. Video error**	**Established date**		
		Color error	**Revised date**		

☞**A6**

Check color by input
-External Input
-AV
-HDMI

Color error? — Y →

N ↓

Check error color input mode

☞ **A7**

※ Check and replace Link Cable (EPI or Vx1 Cable) and contact condition

Color error? — Y → Replace Main B/D → **Color error?** — Y → Replace module

N ↓ .... **N** ↓

End

☞**A20**

Check Test pattern

External Input/ Component error → Check external device and cable → **External device/Cable normal** — Y → Replace Main/T-con B/D

N ↓

Request repair for external device/cable

N ↑

HDMI error → Check external device and cable → **External device/Cable normal** — Y → Replace Main/T-con B/D

4

Standard Repair Process					
	Error symptom	**A. Video error**	**Established date**		
		Vertical / Horizontal bar, residual image, light spot, external device color error	**Revised date**		

Vertical/Horizontal bar, residual image, light spot

☞**A6**

Check color condition by input
-External Input
-HDMI

→ **Screen normal?**
- Y → Check external device connection condition → **Normal?**
  - Y → ☞ **A7** Check and replace Link Cable → **Screen normal?**
    - N → Replace Main/T-con B/D **For LGD panel** / Replace Main B/D **For other panel** → **Screen normal?**
      - N → Replace Module
      - Y → **End**
    - Y → **End**
  - N → Request repair for external device
- N → Replace module
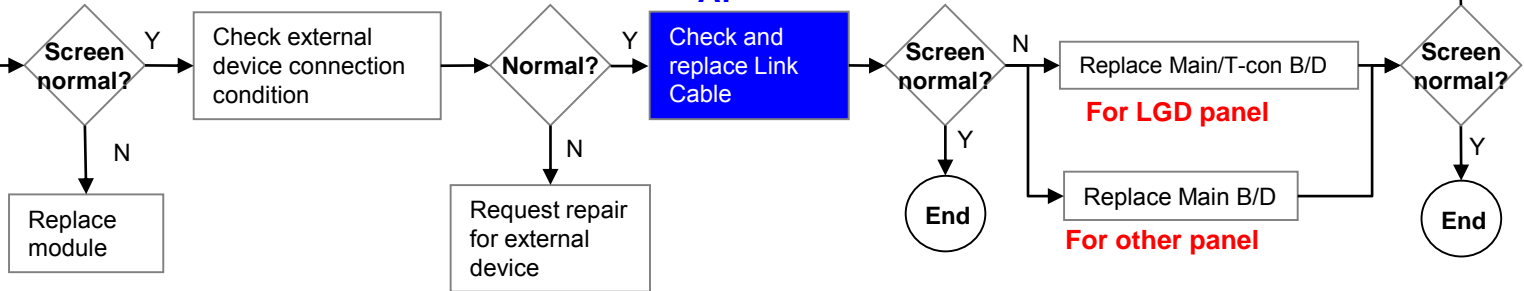

External device screen error-Color error

Check S/W Version → **Check version**
- N → Check screen condition by input
  -External Input
  -Component
  -HDMI/DVI →
  - **External Input error** / **Component error** → Connect other external device and cable (Check normal operation of External Input, Component, RGB and HDMI/DVI by connecting Jig, pattern Generator ,Set-top Box etc.) → **Screen normal?**
    - N → Replace Main/T-con B/D
    - Y → Request repair for external device
  - **HDMI/DVI** → Connect other external device and cable (Check normal operation of External Input, Component, RGB and HDMI/DVI by connecting Jig, pattern Generator ,Set-top Box etc.) → **Screen normal?**
    - N → Replace Main /T-con B/D
    - Y → Request repair for external device
- Y → S/W Upgrade → **Normal screen?**
  - N → (back to Check screen condition)
  - Y → **End**

5

Standard Repair Process					
	Error symptom	**B. Power error**		**Established date**	
		No power		**Revised date**	

☞**A8**

Check LED

. Stand-By: Red or Turn On
. Operating: Turn Off

Power LED On? — Y →

Power LED On? — N ↓

Check Power cord was inserted properly

Normal? — N →

Normal? — Y ↓

(**Close**)

Check ST-BY 3.5V

☞**A9**

DC Power on by pressing Power Key On Remote control

Normal operation? — N →

Normal operation? — Y ↓

☞**A9**

Check Power On '"High" — **OK?** — Y → Replace Power B/D

OK? — N ↓ Replace Main B/D

☞**A9**

Measure voltage of each output of Power B/D

Normal voltage? — Y → Replace Main B/D

Normal voltage? — N ↓ Replace Power B/D

Normal voltage? — Y ↑

Normal voltage? — N ↓

Replace Power B/D

6

	Error symptom	**B. Power error**	**Established date**		
		Off when on, off while viewing, power auto on/off	**Revised date**		

Check outlet

Check A/C cord

Check for all 2- phase power out

Error? — N → ☞**A11** **Check Power Off Mode** → **CPU Abnormal** / **Abnormal 1** → Replace Main B/D → **Normal?** — Y → **End**

Y ↓

Fix A/C cord & Outlet and check each 2 phase out

Normal? — N → Replace Power B/D

☞**A9** **(If Power Off mode is not displayed) Check Power B/D voltage** → **Normal voltage?** — Y → Replace Main B/D

※ Caution
Check and fix exterior of Power B/D Part

Normal voltage? — N → Replace Power B/D

7

Standard Repair Process					
	Error symptom	**B. Power error**	**Established date**		
		Off when on, off while viewing, power auto on/off	**Revised date**		

* Please refer to the all cases which can be displayed on power off mode.

| Power Off list	Explanation	Action contents
KEYTIMEOUT	Power off when TV is not turned off during a certain time RESULT : micom force to trigger TV power off. CONDITION : When pressing power key while power on/off status, CPU does not response within 8 seconds	Check & Change Main B/D
1SEC Power OFF	Almost the same as Power Off by KEYTIMEOUT. If there is no vaild communication Bet ween CPU and MICOM for more than 5 seconds, the MICOM switched off PSU and Records. Power off by 1SEC Power off. In this case, we don't have information where the malfunction exactly occurred. But in in indicates that CPU had stopped and rebooted.	Check & Change Main B/D
ACDET	In case of AC Off (It is normal when the power cord is unplugged.)	Normal
	If there are many ACDETs connected, Power Board is defective	Check & Change Power B/D
5V MNT	Power off by unstable AC power detect. RESULT : micom check the stable power. CONDITION : When AC on or DC on, stabilization check routine (Power Detect High Check) fail after multi power on.	Check & Change Power B/D
CPUABNORMAL	If the CPU attempts to reset in case of abnormal operation and Shut Down in case of failure.	Check & Change Main B/D
NO POLING	Power off when receiving no ack. RESULT : TV power off/on (Reboot) CONDITION : There is no I2C response from CPU for 15 seconds.	Check & Change Main B/D
CPUCMD	Power off by main SoC command.	Check & Change Main B/D
INV_ERROR	Power off by module error (OLED) CONDITION : OLED Module send signal to micom	Check & Change OLED Module
ONRF_FAIL	RESULT : Reboot, CONDITION : OLED module compensation is running but fails.	Check & Change OLED Module
PNWASHFAIL	Power off by panel noise wash function fail case.	Check & Change OLED Module
RESET	When Micom is reset by AC Off	Normal Case
KEY	Power off by Local key	
OFFTIMER	Power off by Off timer	
SLEEPTIMER	Power off by sleep timer	
NOSIG	Power off by No Signal	
FANSTOP	Power off by FAN operation stopped	
INSTOP	Power off by Instop Key	
AUTO OFF	Power off by auto off function	
RESREC	Power off by reserved recording	
RECEND	Power off when recording stops	
SWDOWN	Reboot by SW down load function	
UNKNOWN	No meaning (same as initial value)	
COMP_END	OLED threshold voltage degradation(Compensation) completes.	
PNWASHDONE	Power off by panel noise wash function complited. (OLED)

Check the contact condition of the Link Cable, especially dust or mis insertion.

A7

Check for poor cable contact

Item	Symptom Name	Cause	Symptom Image
CABLE	Color smear	Poor broken pin of FFC cable	
CABLE	R Color Excessive	Color is Excessive due to FFC Cable Contact.	
CABLE	Screen darkness	screen is dark due to poor contact due to disconnection of the FFC cable pin.	
CABLE	G Color Excessive	G color transient due to poor FFC cable connection	

A - 1/11

Item	Symptom Name	Cause	Symptom Image
CABLE	Color spread	LVDS cable connection problem	
CABLE	Color spread	LVDS cable connection problem	
CABLE	Color spread	LVDS cable connection problem	
CABLE	Screen stop	Due to foreign substance withi nLVDS cable PIN	

A - 2/11

Item	Symptom Name	Cause	Symptom Image
Main	**Screen noise**	**Bit noise from horizontal screen**	
Main	**Screen noise**	**Broken screen due to Main IC problem**	
Main	**Dark picture**	**Dark left-side screen**	
Main	**Broken picture**	**Top/bottom screen part Picture problem due to tuner Inner side quality problem**	
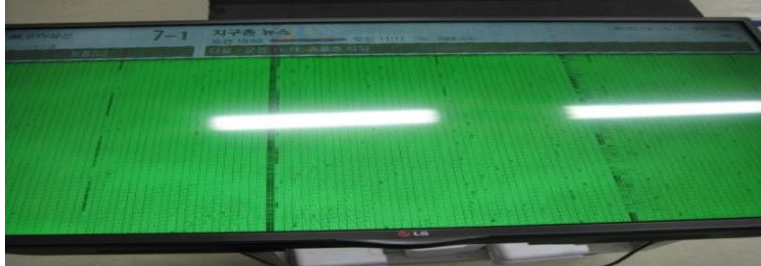

A - 3/11

Item	Symptom Name	Cause	Symptom Image
Main	Broken screen	Broken screen in a horizontal manner	
Main	Screen spread	Screen corner appears blurry	
Main	Color Spread	Color spread on the screen	
Main	Blurry Screen	Blurry picture on the screen	
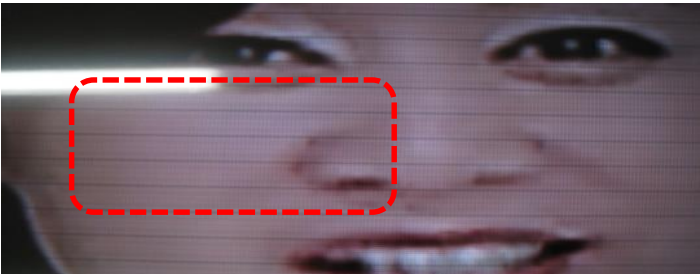

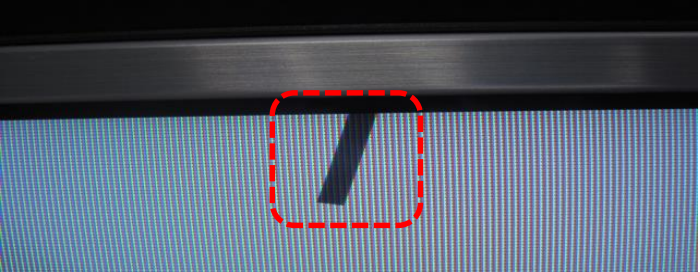

Appendix. Examples of Symptoms(Main)

Item	Symptom Name	Cause	Symptom Image
Main	Broken picture	No problem at the initial stage, G-color spread after 10 minutes	
Main	Right-side Screen problem	Right-side screen problem	
Main	LG logo Screen problem	Screen picture spread problem	
Main	Right-side picture problem	No problem at the initial stage. During Heat run, right-side picture problem	
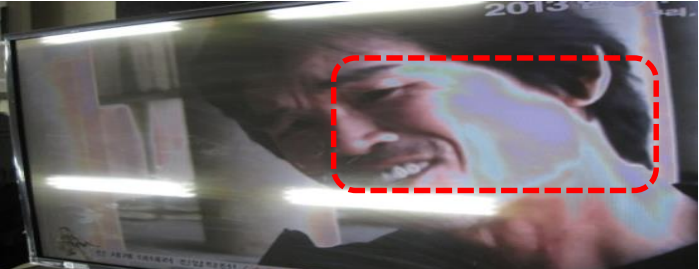

Appendix. Examples of Symptoms(Module)

Check parts by symptom

| Item	Symptom Name	Cause	Symptom Image
MODULE	Isometric Horizontal Bar	Isometric horizontal bars occur throughout the screen	
MODULE	Internal matter	BLU internal foreign matter inflow	
MODULE	Image broken	6 block image broken	
MODULE	Image broken	Screen sync signal broken	
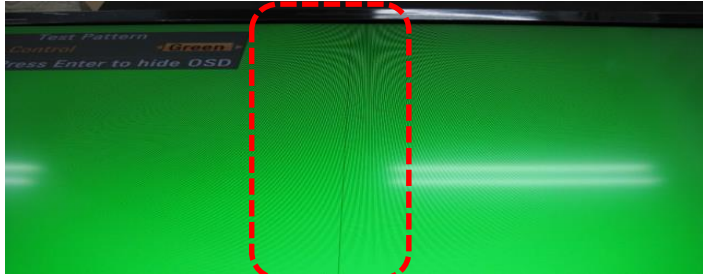

A - 6/11

Appendix. Examples of Symptoms(Module)

Check parts by symptom

| Item	Symptom Name	Cause	Symptom Image
MODULE	Image broken	Internal damage and image breakage due to external impact	
MODULE	Bend on the screen	Bending due to lateral external impact and internal bending of BLU	
MODULE	Vertical smear	Vertical spreading on cube screen in no signal	
MODULE	Over color	Screen contour part brightly Over color	

A - 7/11

Appendix. Examples of Symptoms(Module)

Check parts by symptom

| Item	Symptom Name	Cause	Symptom Image
MODULE	Vertical bar	Center Vertical Bar	
MODULE	Screen darkness	Center of the screen 1 block dark	
MODULE	Vertical bar	Center Vertical Bar	
MODULE	Darkness at the bottom of the screen	MODULE internal BLU breakage
